Subject: Herculaneum interior data

97 home interiors have been cleaned. 13 of these homes had confirmation sample results that failed either the new floor or window criteria. 5 of the 13 homes failed at 2 or more sample locations and would need to be recleaned. 7 of the 13 homes had carpet samples fail the new carpet criteria and would need carpet replacing or carpet recleaning (judgement call ). 2 of the homes that need to be recleaned are also part of the set of 7 homes that had a carpet sample fail the new criteria.

17 homes have been monitored for interior recontamination. Results based on the last round of sampling for each home show the following:

5 homes had samples from 2 or more locations fail the new criteria and would need recleaning. 1 of those homes has been sold and torn down. 2 of the remaining homes had carpet (rugs) sample results that failed the new criteria. Another subset of 5 homes had 1 interior sample fail the new criteria. None of those samples were from carpets. Bottem line: Out of 97 homes, 7 would need recleaning of the carpets or carpet replacement, 5 would need total recleaning, and 8 would need partial recleaning (1 room).
